MEDI-STATISTICS DATASET REPORT

Comprehensive Health Infrastructure & Disease Surveillance Dataset

1. Dataset Overview

This document consolidates the complete underlying datasets powering the Medi-Management System:
• Disease Surveillance Outbreak Dataset: Based on official weekly disease surveillance reporting (refer to accompanying diseases.pdf for raw field telemetry).
• Regional Hospital Infrastructure & Real-Time Capacity Dataset: 30 Hospitals across Tamil Nadu districts with bed, ICU, emergency, ventilator, and geolocation metrics.
• Extraction Date: 29/10/2026 | Records: 30 Healthcare Facilities | Geographic Scope: Madurai & Virudhunagar Regions.

2. Key Dataset Aggregate Indicators

Total Hospitals Monitored	Total Inpatient Beds	Beds Currently Available	ICU Capacity	Ventilators Onboarded
30	2630	792 (30%)	64 avail / 321 total	75 avail / 214 total

3. Healthcare Facilities Dataset (30 Entities)

4. Disease Outbreak Surveillance Dataset Mapping

The epidemiological telemetry in this system correlates hospital demand with regional outbreak indicators. The primary national disease outbreak report is stored as an official 14-page document:

• File: diseases.pdf (Size: ~915 KB, 14 Pages)
• Source: Integrated Disease Surveillance Programme (IDSP), National Centre for Disease Control
• Primary Tracked Outbreaks: Dengue Fever, Viral Pyrexia, Acute Diarrheal Disease (ADD), Malaria, Leptospirosis, Respiratory Syndromes
• Surveillance Granularity: State, District, Reporting Unit, Laboratory Confirmation, Case Totals, Mortality, Preventive Interventions

Active Disease Severity & Surge Index:

Dengue Fever Category: Vector-borne | Trend: +15%	**Active Surveillance - Monsoon Alert**
Viral Pyrexia Category: Seasonal | Trend: +8%	**Moderate Load**
Gastroenteritis (ADD) Category: Water-borne | Trend: -5%	**Stable - Water Treatment Active**
Acute Respiratory Illness Category: Airborne / Viral | Trend: +12%	**Elevated - Urban Centers**
